COMMENTS TRACKER PLATFORM

User Reference Guide & Business Overview

A comprehensive reference guide for project teams, consultants, business analysts, and customer stakeholders

Platform	Comments Tracker v1.0
Document Title	Detailed User Reference Guide & Business Overview
Document Version	1.0
Date	26 May 2026
Prepared For	Project Teams · Consultants · Business Analysts · PMOs · Customer Stakeholders
Document Type	Training · Governance · Sales · Onboarding Reference
Classification	Internal Use / Customer-Facing (controlled distribution)

© Comments Tracker Platform. For internal and customer use under controlled distribution.

1. Document Control

Version	Date	Author	Description
1.0	May 2026	Platform Team	Initial release covering current features

> **Note**
> Always distribute the latest version. Update this table whenever a new platform version is released.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

2. Executive Overview

The Comments Tracker is a browser-based, zero-installation project management platform that replaces fragmented spreadsheets, email chains, and informal note-keeping during Oracle and ERP implementation projects. It provides a structured, governed, and reportable way to manage open points, UAT comments, CRP session feedback, customer action items, and internal delivery tasks - all from a single controlled interface.

Built for the realities of project delivery, the platform serves every role in a delivery team: the Project Manager who needs instant dashboards, the consultant logging a customer comment, and the PMO officer producing a weekly governance report. It requires no server, no database, and no technical setup - open the file in any modern browser and start immediately.

Characteristic	Detail
Deployment	Single HTML file - opens in any modern browser
Installation	None - no server, database, or backend required
Data Storage	Browser local storage, exportable as JSON backup
User Access	Single-user with export/import for team collaboration
Multi-project	One file per project - backup/restore enables replication
Output Formats	Excel (.xlsx), PDF, JSON full backup
Customisation	Full control - dropdowns, columns, filters, statuses
Governance	Audit trail, snapshots, Delivered to Customer flag

© Comments Tracker Platform. For internal and customer use under controlled distribution.

3. Platform Purpose

Projects involving customer workshops, UAT cycles, or CRP sessions generate a high volume of open points, questions, and action items. Without a dedicated tool, teams default to Excel files that are quickly outdated, email threads that lose context, and verbal follow-ups that leave no audit trail.

The Comments Tracker fills this gap - a professional, lightweight, reusable tracking platform any implementation team can deploy immediately, without procurement delays, IT involvement, or complex onboarding.

CORE OBJECTIVES

- Centralise all project open points in a single, searchable, filterable registry.
- Ensure every record has a clear owner, status, due date, and resolution path.
- Give project managers real-time dashboards without manual status calls.
- Support governance with audit trails, snapshots, and customer delivery confirmation.
- Enable professional reporting through Excel, PDF, and dashboard exports.
- Be reusable across multiple customers and projects without rebuilding from scratch.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

4. Target Users

User Role	Primary Platform Use
Project Manager (PM)	Monitor dashboards daily, manage escalations, produce reports, confirm delivery milestones.
Senior Functional Consultant	Log open points from workshops, update statuses, document solutions, confirm Delivered to Customer.
Junior Consultant / BA	Create and update assigned records, add follow-up notes, log solutions as work progresses.
UAT Coordinator	Manage UAT test results, track failing items, close resolved comments, export UAT closure reports.
Customer Key User	Review open points, monitor resolution progress, confirm satisfaction and delivery.
PMO / Governance Officer	Access audit trail, review snapshots, export backups, produce governance reports.
Delivery Lead / Architect	Oversee cross-module dependencies, review related records, manage effort and priority.
Support / Hypercare Team	Track post-go-live issues, manage SLAs, log internal comments, mark items as delivered.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

5. Business Use Cases

Use Case	Description	Key Features Used
UAT Session Tracking	Record every tester comment, assign owners, set due dates, track through resolution and customer sign-off.	Status, Due Date, Delivered to Customer, Dashboard
CRP Open Points	Capture Conference Room Pilot open points, follow up after each session systematically.	Related Records, Snapshots, Excel Export
Customer Action Register	Maintain a formal register of customer commitments, pending decisions, and agreed actions.	Status Types, Delivered to Customer, Overdue
Internal Task Tracker	Manage consultant deliverables, internal dependencies, and cross-team work.	Bulk Update, Required Teams, Effort, Work Hours
Delivery Status Reporting	Produce weekly delivery reports from live dashboards and exports for PMO or steering committee.	Dashboard, PDF Export, Excel Export
Go-Live Readiness Check	Review all open items before cut-over using the Risk Dashboard.	Risk Dashboard, Overdue Tasks, High/Critical filter
Hypercare Issue Register	Track post-go-live issues, manage resolution cycles and customer communication.	Status, Delivered to Customer, Audit Trail
Executive Steering Report	Provide management with a concise summary of project health and delivery alignment.	Executive Dashboard, PDF Export, Done Not Delivered

© Comments Tracker Platform. For internal and customer use under controlled distribution.

6. Navigation Overview

The platform uses a persistent header navigation bar always visible at the top of every screen.

Navigation Item	Type	Contents / Purpose
Tracker	Direct Tab	Main records table - add, edit, filter, bulk-update all records.
Dashboard	Direct Tab	Four analytics views: Executive, Progress, Risk, Analysis.
Administration	Dropdown	Dropdown Values Manager, Column Manager, Project Information, Theme.
Data Management	Dropdown	Import/Export Excel, Export PDF, Export Full Backup JSON, Restore.
Monitoring	Dropdown	Audit Trail, Version Snapshots, Overdue Tasks.
Overdue Alert	Live Button	Shows overdue count in real time - turns red when overdue items exist. Click to go to Overdue Tasks.

✓ **Best Practice**

The overdue alert is the fastest governance check. If it shows red before a customer meeting, review Overdue Tasks immediately.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

7. Tracker Page

The Tracker is the central working area. It displays all records in a structured, searchable table with full control over filtering, column visibility, and record management.

Status Summary Cards

A row of real-time cards above the toolbar shows the current count by status type. Cards update instantly when records are added, edited, filtered, or deleted. When filters are active, cards reflect the filtered subset.

Toolbar Reference

Button	What It Does	When to Use
+ Add Record	Opens the blank Add Record form modal.	Log any new comment, open point, or action item.
✅ Mark as Done	Sets all selected records to Completed status in one action.	Batch-close resolved UAT or CRP items after a review session.
↶ Undo	Reverts the most recent add, edit, delete, or bulk update.	Immediately after an accidental change - one action only.
⭐ Favourites	Toggles the table to show only starred records.	Focus on personal watchlist or escalation items.
🔎 Filters & Views	Opens the Filters & Views side drawer.	Any time filtering, searching, or saved views are needed.
👁️ Columns	Expands the column visibility panel.	Show, hide, or reset visible columns.
✕ Clear Filters	Resets all active filters to the default unfiltered view.	Return from a filtered view to the full record list.

Record Interactions

User Action	Result	Business Purpose
Single Click on row	Selects record, activates Bulk Actions panel.	Select for batch operations.
Double Click on row	Opens full Edit Record modal.	Access and update all fields of the record.
Tick the checkbox	Selects / deselects the record.	Precise multi-record selection.
Click ⭐ star icon	Toggles Favourite on/off.	Mark high-priority or frequently referenced items.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

User Action	Result	Business Purpose
Click Edit (Actions col)	Opens Edit Record modal.	Explicit edit action - same as double-click.
Click Delete (Actions col)	Confirmation prompt → permanent removal.	Remove duplicate, invalid, or test records.

Bulk Actions Panel

When one or more records are selected, the Bulk Actions panel appears above the table. Update one field across all selected records simultaneously.

Bulk-Updatable Field	Typical Scenario
Status	Mark 15 items as Done after a successful resolution review.
Priority	Escalate 5 items to Critical after a customer escalation call.
Business Unit	Reassign a group of records to a new BU.
Due Date	Extend the due date of all Waiting items by one week.
Type	Reclassify a batch from New Requirement to Configuration Change.
Scope	Move a set of records from Scope A to Scope B after clarification.
Effort Estimation	Update effort for all unestimated records after a planning session.
Cross-Modules	Mark a group as requiring cross-module alignment.
Required Teams	Assign the Finance Team to a block of finance-related open points.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

8. Record Management

Adding a New Record

1. Click + Add Record in the toolbar.
2. The Add Record modal opens with all fields blank (ID may be auto-generated).
3. Fill in all relevant fields (see Section 9 for full field reference).
4. Click Save. Record appears in the tracker immediately; status cards update.
5. Audit trail logs a "Record Created" entry automatically.

Editing a Record

6. Double-click any row, or click the Edit icon in the Actions column.
7. The Edit Record modal opens with all current values populated.
8. Update any field as required.
9. Click Save. Table refreshes automatically.
10. Audit trail logs every changed field with old and new values.

Deleting a Record

11. Click the Delete icon in the Actions column.
12. A confirmation prompt appears - confirm to proceed.
13. The record is permanently removed.
14. Click Undo immediately to reverse an accidental deletion.
15. Audit trail logs a "Record Deleted" event.

> ⚠ **Important Notice**
> Deletion is permanent unless Undo is used immediately. For records deleted in a previous session, restore from a Full Backup JSON.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

9. Record Fields - Detailed Reference

Every record contains the following fields. Understanding each field ensures correct data entry, accurate dashboards, and meaningful reports.

Field	Purpose & Business Use	Example Value	Dashboard / Export Impact
ID	Unique identifier. Manual (REQ-001) or auto-generated.	REQ-001	Tracker table, exports, audit trail, related records
Business Unit (BU)	Department or business area the record belongs to.	Sales, Finance, IT	Dashboard charts, Filters, Excel pivot
Date (Raised)	Date the comment or open point was first raised.	2026-05-15	Date filters, Excel export
Due Date	Target resolution date. Drives overdue detection and all due-date metrics.	2026-06-01	Overdue Tasks, Dashboard cards, Filters
Priority	Urgency: Critical, High, Medium, Low.	High	High/Critical Open cards, Filters, badges
Delivered to Customer	Yes/No toggle. Confirms item communicated to customer.	Yes	Done Not Delivered counter, Filters, Excel pivot
Work Hours	Estimated effort in hours.	8	Effort Summary cards, Excel export
Requirement	Full description of the comment or action. Primary content field. Required.	CPQ Guided Selling images missing on iPad.	Tracker table, Search, PDF report, Excel
Status	Lifecycle status. Configurable. Each value mapped to a Status Type.	Not Started, Waiting, Done	All dashboards, Overdue, Filters, status cards
Type	Record classification.	New Requirement, Bug, Config Change	Dashboard charts, Filters, Excel pivot
Scope	Functional module or area.	CPQ, CX Sales, Finance	Dashboard charts, Filters, Excel pivot
Effort Estimation	Qualitative effort level.	Low, Medium, High	Dashboard charts, Excel pivot

© Comments Tracker Platform. For internal and customer use under controlled distribution.

Field	Purpose & Business Use	Example Value	Dashboard / Export Impact
Cross-Modules	Indicates cross-team alignment need.	Yes, No, Partial	Dashboard charts, Filters, Excel pivot
Required Teams	Teams involved in resolution.	CX Team, Finance Team	Overdue by Assignee, Filters
Solution	Final resolution or agreed design decision.	Price list corrected in CPQ Admin. Published UAT 22 May.	Tracker table, PDF report, Excel
Internal Comment	Private team notes not for the customer.	Discuss in team call before demo.	Excel export (marked internal)
Follow-up History	Timestamped user-authored notes over time.	22 May: Fix deployed. 24 May: Customer tested, pass.	Record modal (not in table view)
Related Records	Links to other records with a relationship note.	Links REQ-005 - same CPQ root cause.	Tracker table (count badge), Record modal

© Comments Tracker Platform. For internal and customer use under controlled distribution.

10. Delivered to Customer

The Delivered to Customer flag introduces a formal two-stage closure process that distinguishes between internal completion and customer-facing delivery - one of the most strategically important features in the platform.

Stage	Meaning	Platform Indicator
Stage 1 - Internally Done	The delivery team has completed the work.	Status = Done / Completed type
Stage 2 - Delivered to Customer	The resolution has been communicated to and acknowledged by the customer.	Delivered to Customer toggle = Yes

> ⚠ **Important Notice**
> A record with Status = Done but Delivered to Customer = No is still a governance risk. The customer has not been informed. This is tracked in the "Done Not Delivered" counter on the Executive and Risk dashboards.

Why This Field Is Critical

- In UAT, customers may sign off on modules with outstanding items never formally presented to them.
- In CRP, consultants complete configuration but delay informing the customer - risking misalignment.
- In go-live readiness reviews, all open points must be resolved AND communicated before cut-over.
- This flag creates a formal chain of accountability: completed → delivered → confirmed.

How to Use

16. Resolve the item and set Status to Done.
17. Present or communicate the resolution to the customer.
18. Open the record and toggle Delivered to Customer to Yes.
19. Save. The "Done Not Delivered" counter on the dashboard decreases immediately.

> ✓ **Best Practice**
> Use the "Done Not Delivered" filter in the Filters drawer before every weekly status call. This generates the exact list of items needing customer follow-up.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

11. Related Records

The Related Records feature allows any record to be formally linked to one or more other records. Each link includes a free-text note explaining the relationship. Links are bidirectional - when Record A is linked to Record B, Record B automatically shows the reverse link.

Common Use Cases

Scenario	Relationship Type	Example Note
Duplicate comment	Duplicate	Raised by two testers in the same session. REQ-015 is the master.
Same root cause	Root Cause	Both trace back to the same CPQ price list configuration error.
Dependency	Dependency	REQ-022 must be completed before this can be resolved.
Customer clarification	Clarification	REQ-018 clarifies the scope of this item.
Same module impact	Related	Both items affect the same Guided Selling flow in CPQ.
Split requirement	Split	This item was split from REQ-007 after scope review.
Follow-on change request	Follow-on	This CR raised as a result of the resolution agreed in REQ-033.

Step-by-Step - Linking Records

20. Open the first record for editing.
21. Scroll to the Related Records section at the bottom of the form.
22. Select the target record from the dropdown (shows ID and requirement text).
23. Enter a short relationship note in the text field.
24. Click Add Link. The linked record appears in the list below.
25. Save the record. The relationship is stored and bidirectional.
26. Open the linked record - it will show the reverse link automatically.

> **Note**
> The Related Records column in the tracker table shows a count badge when a record has links. Open the record to view the full list with notes.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

12. Follow-up History

Follow-up History provides a timestamped, chronological log of notes added by team members over the life of a record. It captures human commentary - decisions made, calls held, promises given, and actions taken.

Follow-up History vs. Audit Trail

Attribute	Follow-up History	Audit Trail
Authored by	User - manually typed	System - automatically recorded
Content	Free-text commentary and decisions	Field changes: old value → new value
Purpose	Human narrative and communication log	Technical change log and governance record
Visibility	Inside record modal only	Monitoring → Audit Trail page
Exportable	Included in Full Backup only	Yes - dedicated Excel export available
Best used for	Recording calls, decisions, commitments	Verifying when and what was changed

How to Add a Note

27. Open the record in Edit mode.
28. Scroll to the Follow-up History section.
29. Type your note (e.g. "22 May - Called Ahmed. Fix confirmed deployed to UAT. Customer testing scheduled 24 May.").
30. Click Add Note. The note appears with an automatic timestamp.
31. Save the record. The note is stored permanently.

> ✓ **Best Practice**
> Encourage consultants to add a follow-up note after every customer call. This builds a self-documenting project log invaluable during lessons-learned reviews and customer disputes.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

13. Filters and Saved Views

The Filters & Views drawer provides comprehensive control over which records are displayed. Open it by clicking 🔎 Filters & Views in the toolbar.

Available Filters

Filter	Type	Operator / Behaviour	Business Use Case
Search	Full-text	Matches ID, BU, Requirement, Solution, Internal Comment	Find records by keyword from a customer email or meeting.
Business Unit	Multi-select	Select one or more BUs - shows count per option	Filter to one team's records for a dedicated review.
Status	Multi-select	Select one or more statuses	Show only open statuses for a backlog review.
Priority	Multi-select	Select one or more priorities	Show only Critical and High before an escalation call.
Due Date	Date filter	Equal / After / Before / Between	Show everything due by end of this week.
Type	Multi-select	Select one or more types	Filter to New Requirements only for scope review.
Scope	Multi-select	Select one or more modules	Show only CPQ items for the CPQ consultant.
Effort	Multi-select	Select one or more effort levels	Filter High effort for capacity planning.
Cross-Modules	Multi-select	Yes / No / Partial	Show all items requiring cross-team coordination.
Raised Date	Date filter	Equal / After / Before / Between	Show items raised in the last two weeks.
Favourites	Toggle button	Shows only starred records	Focus on personally flagged items.

Filter Badge & Clear Filters

When filters are active, a numbered badge appears on the Filters & Views button. The status summary cards also reflect the filtered data. Click ✕ Clear Filters in the toolbar to reset everything immediately.

Saved Views

© Comments Tracker Platform. For internal and customer use under controlled distribution.

Save any filter combination as a named view. Apply with one click from the Saved Views dropdown at the top of the filter drawer. Views are stored in the browser and included in the Full Backup.

Suggested View Name	Filters to Configure	Who Uses It
My Open Items	Status = active statuses; BU = [my BU]	Individual consultant - daily working list.
Done Not Delivered	Status = Done; Delivered to Customer = No	PM - items needing customer communication.
Overdue Items	Due Date = Before Today; Status = active statuses	PM / PMO - escalation and follow-up.
High Priority Open	Priority = Critical + High; Status = active	PM - top-priority escalation list.
Customer Pending	Status = Waiting + Pending Customer	Customer / Key Users - items awaiting their input.
CPQ Items Only	Scope = CPQ	CPQ Consultant - module-specific view.
Due This Week	Due Date = Between [Mon] and [Sun]	PM - weekly planning view.

How to Create a Saved View

32. Open the Filters & Views drawer and apply the desired filters.
33. Click 💾 Save View.
34. Enter a clear, descriptive name (e.g. "CPQ – High Priority Open").
35. The view appears in the Saved Views dropdown immediately.
36. To apply: select from the dropdown - all filters restore automatically.
37. To delete: select the view and click 🗑 Delete View.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

14. Column Visibility

The column visibility panel lets users control which columns appear in the tracker table without affecting data. Different team members can configure the table for their role.

38. Click Columns in the toolbar.
39. The panel expands below the toolbar showing a checkbox per column.
40. Check or uncheck to show or hide columns.
41. Click Show All to make every column visible.
42. Click Reset Default to return to the system default column set.
43. Selection is saved automatically in the browser.

> ✓ **Best Practice**
> For customer-facing demos, hide internal columns (Internal Comment, Work Hours) and show only business-facing fields (Requirement, Status, Priority, Due Date, Solution, Delivered to Customer).

© Comments Tracker Platform. For internal and customer use under controlled distribution.

15. Column Manager

The Column Manager (Administration → Dropdown Values & Columns) allows custom columns to be added and existing columns to be configured - all without code changes.

Column Types

Type	Description	Example Use
Text	Free-text input.	Developer Name, Customer Contact, Meeting Reference
Number	Numeric input.	Ticket Number, Sprint Number, Change Request ID
Date	Date picker.	Resolved Date, Customer Accepted Date, Review Date
LOV / Dropdown	Dropdown with configurable values from the Dropdown Values Manager.	Assigned Team, Module Phase, Resolution Category
Boolean Switch	Yes/No toggle.	Customer Accepted, Regression Tested, Change Approved

Column Configuration Settings

Setting	Description
Name	The display label in the column header and record form.
Type	Input type: Text, Number, Date, LOV, Boolean.
Width	Pixel width of the column in the tracker table (e.g. 120px, 200px).
Sequence	Display order - lower number appears further left.
Visible	Whether the column appears in the tracker by default.
Filter Visible	Whether this column appears as a filter in the Filters & Views drawer.
Filter Sequence	Order of this filter in the drawer - lower appears higher up.

How to Add a Custom Column

44. Go to Administration → Dropdown Values & Columns.
45. Expand the Column Manager section.
46. Enter a Column Name, select a Type, enter a Width.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

47. Click + Add Column. The column appears in the tracker immediately.
48. If type is LOV, add values for it in the Dropdown Values Manager.

> ⚠ **Important Notice**
> Removing a custom column also removes its values from all records. Always export a Full Backup before deleting any column.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

16. Dropdown Values Manager

Located in Administration → Dropdown Values & Columns. Controls the values available in every dropdown field throughout the platform.

List Name	Field Controlled	Default Values (All Configurable)
Status	Record lifecycle status	Not Started, Waiting, Done, After UAT
Type	Record classification	New Requirement, Existing Requirement
Scope	Functional module / area	CPQ, CX Sales, Finance, IT, PPM, BI
Effort	Effort level	Low, Medium, High, To be decided by...
Business Unit	Department	Sales, Finance, Operations, IT, HR
Cross-Modules	Cross-module alignment	Yes, No, Partial
Required Teams	Teams needed for resolution	CX Team, Finance Team, BI Team, Tech Team
Priority	Urgency level	Critical, High, Medium, Low
Custom LOV	Any custom LOV column added	Values defined by the user

Operation	How to Perform	Important Note
Add Value	Click + Add, type value name, click Add.	Appears immediately in the dropdown throughout the platform.
Rename Value	Click edit icon, type new name, confirm.	Reflected in all existing records automatically.
Delete Value	Click delete icon, confirm.	Only allowed if no records use the value - update records first.
Set Sequence	Enter number in Seq field and confirm.	Lower number = appears higher in the dropdown list.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

17. Status Type and Due-Date Tracking

Two configuration settings control how the platform interprets each status value: the Status Type and the Due-Date Tracking toggle. Both are configured in the Dropdown Values Manager.

Status Type	Platform Behaviour	Typical Status Values
Open	Pending action. Counted in Open Items. Due date tracked.	Not Started, New, Open, To Be Reviewed
Work In Progress	Actively being worked on. Due date tracked.	In Progress, Under Development, WIP, Under Review
Waiting / Pending	Blocked or awaiting external input. Due date tracked.	Waiting, Pending Customer, Pending Oracle
Deferred	Postponed to a future phase. Due date tracking suspended. Not overdue.	After UAT, Deferred, Future Phase, Phase 2
Completed	Resolved. Counted in Completion % and Completed metrics.	Done, Resolved, Closed, Finished, Accomplished
Cancelled / Not Applicable	Out of scope or cancelled. Excluded from all calculations.	Cancelled, Rejected, Duplicate, Out of Scope

Status Value Example	Status Type	Due-Date Tracking	Overdue Eligible?
Not Started	Open	Enabled	Yes
In Progress	Work In Progress	Enabled	Yes
Waiting	Waiting / Pending	Enabled	Yes
After UAT	Deferred	Disabled	No
Done	Completed	Disabled	No
Cancelled	Cancelled / Not Applicable	Disabled	No

> ⚠ **Important Notice**
> Always configure both Status Type and Due-Date Tracking whenever a new custom status is added. Unconfigured statuses may produce incorrect dashboard counts and overdue calculations.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

18. Dashboard Overview

The Dashboard provides four analytics views, each designed for a different audience. The dashboard always reflects the full dataset - all records, regardless of active Tracker filters.

View	Audience	Key Question Answered
Executive View	Senior Management, Steering Committee, PM	"Where are we overall? What are the immediate risks?"
Progress View	PM, Delivery Lead, Daily Standup	"What did we accomplish today and this week? Is the backlog shrinking?"
Risk View	PM, Delivery Lead, PMO	"Who has overdue items? What is not yet delivered to the customer?"
Analysis View	PM, BA, Reporting Team	"How are records distributed? What does the effort picture look like?"

© Comments Tracker Platform. For internal and customer use under controlled distribution.

19. Executive Dashboard

The Executive View provides a top-level management snapshot - the ideal screen for a steering committee or weekly status meeting opening. It answers: "How are we performing and where is the immediate risk?"

Card	Description	Action When Non-Zero
Completion %	Percentage of all records in Completed status type. Includes a progress bar.	Primary KPI - track weekly movement.
Total Records	Total count of all records.	Volume indicator - tracks scope growth.
Open Items	Records in Open, WIP, or Waiting/Pending status types.	Active workload - what still needs resolution.
Completed	Records in Completed status type.	Delivery progress indicator.
Done Not Delivered	Done records with Delivered to Customer = No.	Schedule customer communication now.
Overdue	Records past due date in active statuses.	Go to Risk View for assignee-level detail.
Due This Week	Records due within the current calendar week.	Plan capacity to resolve before week end.
High/Critical Open	Open records with High or Critical priority.	Prioritise in daily and weekly reviews.
Favourites	Records starred as Favourites.	PM's personal watchlist - items under close monitoring.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

20. Progress Dashboard

The Progress View tracks daily and weekly movement. Ideal for daily standups and weekly team meetings.

Section	Card	Meaning
Today	Completed Today	Records whose status changed to Completed today.
Today	Delivered Today	Records where Delivered to Customer was set to Yes today.
Today	Due Today	Records with today as their due date - not yet overdue but same-day action required.
Today	Overdue Today	Records that became overdue today.
This Week	Completed This Week	Total records completed in the current calendar week.
This Week	Delivered This Week	Records delivered to the customer this week.
This Week	Created This Week	New records added this week.
This Week	Net Open Change	Created minus Completed this week. Negative = backlog shrinking.
Effort	Completed Hours	Total work hours for records completed this week.
Effort	Remaining Hours	Total work hours across all records still in active statuses.

✓ **Best Practice**

A negative "Net Open Change" is a positive signal - the team is closing more than is being opened. Use this as a delivery velocity indicator in weekly reports.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

21. Risk Dashboard

The Risk View surfaces delivery risks, ownership gaps, and customer communication failures. Review this before every customer meeting or escalation.

Card	What to Look For	Recommended Action
Overdue	Any non-zero value requires immediate attention.	Expand to Overdue Tasks page for detail.
Users With Overdue	Number of team members with at least one overdue item.	Identify if overdue is concentrated on one person.
Unassigned Overdue	Overdue records with no owner - no accountability.	Assign these immediately - highest governance risk.
Due Today	Items due today - still actionable before they become overdue.	Confirm with assignees they will be completed today.
Due This Week	Pipeline of items approaching overdue.	Plan to clear before week ends.
Done Not Delivered	Resolved but not yet presented to the customer.	Schedule customer communication.
High/Critical Open	Active high-risk items regardless of due date.	Confirm adequate resources assigned.

Ownership Risk Charts

The lower section shows visual charts of open and overdue items by assignee or Required Teams. These immediately reveal whether one person carries a disproportionate share of overdue risk.

> **Note**
> For full ownership visibility, add an "Assigned To" LOV column via the Column Manager. Without it, the charts group by Required Teams.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

22. Analysis Dashboard

The Analysis View provides detailed breakdowns and charts for in-depth project reporting. It answers: "How are records distributed? What does the effort picture look like? Which modules have the most open work?"

Chart	Dimension	Business Use
Status Distribution	Status Value	See how records are spread across lifecycle stages.
Priority Distribution	Priority Level	Identify if a disproportionate share are Critical or High.
Delivered to Customer	Yes / No	Visualise customer communication completion rate.
Type Breakdown	Record Type	Understand the mix of requirements vs changes vs bugs.
Business Unit	BU	See which departments generate the most work.
Scope Breakdown	Functional Module	Identify which modules have the most open points.
Cross-Modules	Yes / No / Partial	Understand how much work needs cross-team alignment.
Effort Breakdown	Effort Level	See workload distribution by complexity.

Effort Summary Cards

Card	Description
Total Hours	Sum of all Required Working Hours across all records.
Done Hours	Sum of work hours for records in Completed status types.
Remaining Hours	Sum of work hours for records still in active statuses.

✓ **Best Practice**

Use the Analysis View for monthly governance meetings. Export the dashboard as a PDF or screenshot the charts for inclusion in steering committee slide decks.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

23. Overdue Tasks

The Overdue Tasks page provides a dedicated, actionable view of every record past its due date and still in an active status. Access it from Monitoring → Overdue Tasks or the 🔔 header button.

Overdue Logic

A record is overdue when ALL three conditions are true:

- The record has a Due Date set.
- The current date is past the Due Date.
- The record's Status has Due-Date Tracking enabled.

Records in Completed, Deferred, or Cancelled status types are never shown as overdue, even if the due date has passed.

Card	Description	Review Frequency
Overdue Tasks	Total overdue records.	Daily
Users With Overdue	Distinct assignees with at least one overdue record.	Weekly
Unassigned Overdue	Overdue records with no owner - highest risk.	Immediately when non-zero
Due Today	Records due today - not yet overdue but same-day action required.	Every morning
Due This Week	Records due before end of the current week.	Weekly planning

Overdue by Assignee

Overdue records are grouped by assignee. Each group shows: count, record ID, Requirement, Status, Priority, Due Date, and Days Overdue. Designed for use in weekly project meetings - the PM walks through each person's list and agrees on resolution actions.

Export Overdue Tasks

Click ⬇ Export Overdue Tasks to download the overdue register as Excel. Include this in weekly status reports or share directly with assignees as a formal action list.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

24. Data Management

The Data Management menu (💾 Data Management in the nav bar) provides all import, export, backup, and restore capabilities essential for data continuity, team collaboration, and professional reporting.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

25. Excel Import and Export

Importing from Excel

The Import function adds records from an .xlsx or .xls file to the tracker. Useful for migrating data from a legacy spreadsheet or loading a pre-populated record set at project start.

Step	Action
1.	Click 💾 Data Management → Import from Excel.
2.	Select the .xlsx or .xls file from your local machine.
3.	The system reads the first row as headers and maps them to tracker fields.
4.	Matched records are added. Existing records are not deleted.
5.	A confirmation message shows the count of records imported.
6.	Review imported records and correct any field mapping issues.

> ⚠ **Important Notice**
> Test with a small sample file before importing the full dataset. Unmatched column headers are imported as blank values.

Exporting to Excel

Export produces a formatted .xlsx workbook with the full records set and a dedicated pivot analysis sheet.

- Sheet 1 - Records: All tracker records with all field values in a formatted table.
- Sheet 2 - Pivot Analysis: Automatic breakdowns by Status, Priority, Scope, Effort, Cross-Modules, and a full Alignment Matrix.
- Project Information headers at the top of each sheet.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

26. PDF Report

Export PDF Report (💾 Data Management → Export PDF Report) generates a professionally formatted PDF document suitable for weekly status packs, steering committee presentations, and customer delivery documentation.

- Cover section: project name, customer, phase, version, and date.
- Summary cards: Completion %, Total Records, Open Items, Overdue, etc.
- Full record table formatted for print with all key fields.
- Company/customer logo if configured in Project Information.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

27. Full JSON Backup and Restore

The Full JSON Backup is the most complete preservation option. Unlike the Excel export (records only), the JSON backup captures the entire platform state.

What the Full Backup Includes

Component	Description
Records	All records with every field value, follow-up history, and related record links.
Project Information	Customer name, project, phase, version, prepared by, date, scope, environment.
Company Logo	Uploaded logo image (base64) - restores on import.
Dropdown Values	All configured values for every dropdown list including custom LOVs.
Custom Columns	All custom columns with name, type, width, and sequence.
Column Visibility	Which columns are visible in the tracker table.
Column Widths	Exact width setting of each column.
Column Sequence	Display order of all columns.
Filter Configuration	Filter visibility and sequence in the Filters drawer.
Saved Views	All named saved filter views.
Status Type Mapping	Status Type and due-date tracking config for each status.
Theme	Selected colour theme.
Audit Trail	Complete change history of all records.
Snapshots	All version snapshots (record state at each snapshot time).

Export Full Backup

49. Click 💾 Data Management → Export Full Backup.
50. Browser downloads a .json file named with the current date and project details.
51. Store in the project folder or shared drive.
52. Use a clear naming convention: "Comments_Tracker_Backup_Week3_2026-06-01.json".

Restore Full Backup

53. Click 💾 Data Management → Restore Full Backup.
54. Select the previously exported .json file.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

55. The platform replaces ALL current data with the backup contents.
56. All records, settings, audit trail, and snapshots are restored exactly.

> ⚠ **Important Notice**
> Restore replaces ALL current data. Export a new Full Backup before restoring an older one if you need to keep current records.

> ✓ **Best Practice**
> Export a Full Backup at the end of every working day. Share the backup JSON with the PM or store it in project SharePoint. When moving to a new machine or browser, restore from the latest backup.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

28. Project Information

Located at Administration → Project Information. Brands the platform for a specific customer and project, ensuring all exports and reports carry the correct project context.

Field	Example Value	Where It Appears
Customer Name	Company X	Excel header, PDF cover, JSON backup
Project Name	Oracle Sales Implementation	Excel header, PDF cover, JSON backup
Phase	CRP / SIT / UAT / Phase 2	Excel header, PDF cover, JSON backup
Version	V3.2	Excel header, PDF cover, JSON backup
Prepared By	Mohamed Hossam - Senior Consultant	Excel header, PDF cover, JSON backup
Prepared Date	2026-06-01	Excel header, PDF cover, JSON backup
Module Scope	Sales, CPQ, Service, Finance	Excel header, JSON backup
Environment	Dev / Test / Prod	Excel header, JSON backup

Click Save Setup to commit changes. Click Reload Saved Setup to revert unsaved edits. Project Information is included in every Full Backup and restored automatically.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

29. Company / Customer Logo

Upload a customer or company logo to display in the platform header and include in all exports. Supported formats: PNG, JPG, SVG. Stored as base64 in the browser and included in every Full Backup.

57. Go to Administration → Project Information.
58. Click the logo file input button and select a PNG, JPG, or SVG.
59. Logo preview appears immediately in Project Information.
60. Logo also appears in the platform header next to the brand name.
61. Click Save Setup to persist the logo.
62. To remove: click Remove Logo, then Save Setup.

> ✓ **Best Practice**
> Upload the customer's logo before every demo. It immediately personalises the platform and demonstrates reusability to the customer.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

30. Audit Trail

The Audit Trail automatically logs every significant action in the platform without any user effort. Access it from Monitoring → Audit Trail.

Event Type	Details Captured	Example Entry
Record Created	Record ID and all initial field values.	"Record Created - REQ-042 - CPQ price list issue..."
Record Edited	Record ID, field name, old value, new value.	"Status changed: Not Started → Done - REQ-042"
Record Deleted	Record ID and last known values.	"Record Deleted - REQ-018"
Bulk Update	Field updated, old and new values for all affected records.	"Bulk Update - Status → Done - 12 records"
Excel Import	Number of records imported.	"Import from Excel - 28 records added"
Backup Exported	Timestamp of export.	"Full Backup Exported - 2026-06-01 14:32"
Backup Restored	Timestamp of restore and backup date.	"Backup Restored from: 2026-05-30"
Project Setup	Field name, old value, new value.	"Phase changed: CRP2 → UAT"
Snapshot Taken	Snapshot name and record count.	"Snapshot Created - Pre-UAT - 87 records"

Click ⬇ Export Audit Trail to download the full history as Excel. Click 🧹 Clear Audit Trail to remove all entries - always export before clearing.

> ⚠ **Important Notice**
> Once cleared, audit entries cannot be recovered unless a Full Backup containing the audit trail was previously exported.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

31. Version Snapshots

Snapshots capture a named, point-in-time copy of the current tracker records. Stored inside the platform and included in Full Backups.

Timing	Recommended Name	Purpose
Before UAT begins	Pre-UAT Baseline	Freeze the starting state before testers begin.
After each UAT week	UAT Week 1 Close	Record end-of-week resolution state for reporting.
After CRP session	Post-CRP2	Capture exact state after a customer session.
Before bulk update	Pre-Bulk Update – May 22	Allow comparison if the change produces unexpected results.
Before go-live	Go-Live Readiness Check	Formal record of tracker state at cut-over.
After customer sign-off	UAT Sign-Off Confirmed	Permanent record of the agreed closure state.

Action	How to Perform
Take Snapshot	Enter a name → click 📸 Take Snapshot.
View Snapshot	Click View - opens a read-only preview of the records at that point in time.
Compare Snapshot	Click Compare - see what changed between the snapshot and the current state.
Export Snapshot	Click Export - downloads the snapshot as a JSON file.
Delete Snapshot	Click Delete - removes the snapshot from the list.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

32. Themes

Multiple built-in colour themes are available under Administration → Theme. The selected theme is stored in browser local storage and is included in the Full Backup JSON - restored automatically when a backup is restored.

Theme Use Case	Description
Personal Preference	Team members choose the visual style they find most comfortable.
Customer Demo Mode	Use a clean, light theme for customer-facing demos and screen sharing.
Accessibility	Some themes offer better contrast for different visual preferences.
Presentation Mode	A well-themed platform communicates professionalism to customers.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

33. Business User Validation Summary

The following table summarises all platform features reviewed in preparing this guide.

> ⚠ **Testing Scope Notice**
> Screenshot and runtime testing requires the HTML file to be opened in a live browser session. All functional testing in this guide is based on complete source code analysis and UI/UX inspection. Items marked "Not Tested – Manual Required" must be validated by opening the HTML file in a browser.

Feature Area	Test Scenario	Expected Result	Status
Application Launch	Open HTML in browser - no broken screens	Page loads, navigation visible, no errors	Not Tested – Manual Required
Add New Record	Fill form and Save	Record appears in tracker, audit entry created	Not Tested – Manual Required
Edit Record	Double-click, change fields, Save	Fields updated, audit trail logs changes	Not Tested – Manual Required
Delete Record	Click Delete, confirm	Record removed, Undo button activates	Not Tested – Manual Required
Undo Last Action	Delete record, click Undo immediately	Record restored to tracker	Not Tested – Manual Required
Mark as Done (Bulk)	Select records, click Mark as Done	All selected records set to Done	Not Tested – Manual Required
Bulk Field Update	Select 3 records, change Priority to Critical	All 3 records updated simultaneously	Not Tested – Manual Required
Favourite / Unfavourite	Click ☆, toggle Favourites filter	Starred record visible in Favourites view only	Not Tested – Manual Required
Column Visibility	Hide columns, Show All, Reset Default	Columns appear/disappear, setting persists on reload	Not Tested – Manual Required
Delivered to Customer Toggle	Edit record, toggle Yes, Save	Done Not Delivered counter decreases	Not Tested – Manual Required

© Comments Tracker Platform. For internal and customer use under controlled distribution.

Feature Area	Test Scenario	Expected Result	Status
Related Records - Link	Link two records, add note, Save	Both records show link (bidirectional)	Not Tested – Manual Required
Follow-up Note	Add note, Save, reopen	Note persists with timestamp	Not Tested – Manual Required
Filters - Search	Type keyword in search box	Table filters to matching records	Not Tested – Manual Required
Filters - Multi-select Status	Select two statuses	Table shows only records with those statuses	Not Tested – Manual Required
Filters - Due Date Before	Set Due Date filter to Before [date]	Only records with earlier due dates shown	Not Tested – Manual Required
Filters - Clear All	Click Clear Filters	All filters reset, full list returns	Not Tested – Manual Required
Save View	Apply filters, save as named view	Saved view restores same filter state	Not Tested – Manual Required
Delete Saved View	Select view, click Delete View	View removed from dropdown	Not Tested – Manual Required
Add Custom LOV Column	Add LOV column "Assigned Team", add values	Column appears in tracker and form	Not Tested – Manual Required
Add Boolean Column	Add Boolean column "Customer Accepted"	Toggle switch in form and table	Not Tested – Manual Required
Add Dropdown Value	Add "Pending Sign-off" to Status list	Value appears in Status dropdown immediately	Not Tested – Manual Required
Rename Dropdown Value	Rename "After UAT" to "Deferred"	All records using old value updated	Not Tested – Manual Required
Status Type Mapping	Set "Done" to Completed, disable due-date tracking	Done records excluded from overdue	Not Tested – Manual Required
Executive Dashboard	View Completion %, Done Not Delivered, Overdue	Cards show correct counts	Not Tested – Manual Required

© Comments Tracker Platform. For internal and customer use under controlled distribution.

Feature Area	Test Scenario	Expected Result	Status
Progress Dashboard	View Completed Today, Net Open Change	Cards reflect today and this week correctly	Not Tested – Manual Required
Risk Dashboard	View Unassigned Overdue, Users With Overdue	Risk cards and charts correct	Not Tested – Manual Required
Analysis Dashboard	View Status, Priority, Scope, Effort charts	Charts display with correct proportions	Not Tested – Manual Required
Overdue Tasks Page	Create record with past due date	Record appears in Overdue Tasks, cards update	Not Tested – Manual Required
Overdue by Assignee	Verify grouping by team/assignee	Each group shows count and record list	Not Tested – Manual Required
Export Overdue Tasks	Click Export Overdue Tasks	Excel file downloaded with overdue list	Not Tested – Manual Required
Export to Excel	Click Export to Excel	Formatted .xlsx with records + pivot sheet	Not Tested – Manual Required
Import from Excel	Prepare .xlsx, click Import	Records added, count confirmed	Not Tested – Manual Required
Export PDF Report	Click Export PDF Report	Formatted PDF downloaded	Not Tested – Manual Required
Export Full Backup	Click Export Full Backup	JSON file with all data and settings	Not Tested – Manual Required
Restore Full Backup	Click Restore, select JSON file	All records and settings restored	Not Tested – Manual Required
Project Information - Save	Enter all fields, Save Setup	Fields persist after page reload	Not Tested – Manual Required
Logo Upload	Upload PNG logo	Logo visible in header and preview	Not Tested – Manual Required
Logo in Backup	Upload logo, backup, restore	Logo restores correctly	Not Tested – Manual Required

© Comments Tracker Platform. For internal and customer use under controlled distribution.

Feature Area	Test Scenario	Expected Result	Status
Audit Trail - Field Changes	Edit record, check audit trail	Old and new values recorded per field	Not Tested – Manual Required
Export Audit Trail	Click Export Audit Trail	Excel file with full change history	Not Tested – Manual Required
Take Snapshot	Enter name, click Take Snapshot	Snapshot listed with date and record count	Not Tested – Manual Required
Compare Snapshot	Click Compare on a snapshot	Diff view of changes displayed	Not Tested – Manual Required
Export Snapshot	Click Export on a snapshot	JSON file of snapshot records downloaded	Not Tested – Manual Required
Theme Change	Change theme in Administration	Theme applies immediately and persists	Not Tested – Manual Required
Theme in Backup	Change theme, export, restore	Theme restored correctly	Not Tested – Manual Required

© Comments Tracker Platform. For internal and customer use under controlled distribution.

34. Reporting and Governance Benefits

Governance Scenario	How the Platform Supports It	Key Features
Weekly Status Meeting	PM opens Executive Dashboard. Completion %, overdue count, and done-not-delivered visible instantly. PDF export shared before the call.	Executive Dashboard, PDF Export
UAT Closure	All UAT comments in the tracker. PM filters to confirm all are Done + Delivered to Customer before sign-off. Snapshot captures final state.	Filters, Delivered to Customer, Snapshots
Customer Escalation	Customer escalates an issue. PM opens the record, reviews Follow-up History and Audit Trail to provide a full timeline.	Audit Trail, Follow-up History
Go-Live Readiness	Risk Dashboard shows zero overdue, zero unassigned, zero done-not-delivered. PM takes "Go-Live Ready" snapshot as formal evidence.	Risk Dashboard, Snapshots
Resource Overload	Risk View charts reveal one consultant has 12 overdue items. PM reassigns 6 to balance the load.	Risk Dashboard, Overdue by Assignee
Change Request Tracking	New requirement raised post-CRP. New record created with Type = Change Request, linked to original CRP item via Related Records.	Related Records, Type filter
Post-Go-Live Hypercare	Tracker continues in use. Phase updated in Project Information. New snapshot marks hypercare start.	Project Information, Snapshots, Themes

© Comments Tracker Platform. For internal and customer use under controlled distribution.

35. Upsell and Commercial Positioning

THE BUSINESS PROBLEM

Every ERP and CRM implementation generates hundreds of open points, customer comments, UAT defects, and CRP feedback items. Without a dedicated tool, teams manage this volume through email threads, informal messages, personal Excel files, and shared trackers that are constantly out of date.

The result is predictable and costly:

- Items get lost between sessions.
- Ownership is unclear - "I thought you were handling that."
- Due dates are unknown or ignored.
- Customers are not formally informed when items are resolved.
- The PM has no real-time view of delivery status.
- Governance fails at go-live readiness reviews.
- Post-project disputes arise because there is no audit trail.

THE SOLUTION

The Comments Tracker platform provides a structured and professional way to manage customer feedback, comments, delivery actions, and project open points. Instead of relying on scattered Excel sheets, emails, or manual follow-ups, project teams can manage records, ownership, status, due dates, dashboards, and reporting from one controlled interface.

Key Value Propositions

Value Proposition	Customer Benefit
Zero installation	Deploy immediately - no IT ticket, no procurement, no server.
Fully customisable	Adapt dropdowns, columns, and statuses to any customer's terminology.
Professional reporting	Excel and PDF outputs that look like a dedicated reporting tool produced them.
Governance built in	Audit trail, snapshots, and Delivered to Customer add formal governance at no extra effort.
Reusable across projects	One file, one restore - deploy to any new customer in minutes.
Lightweight and fast	No loading delays, no login screens, no sync issues.
Transparent to customers	Customers can receive a copy of the tracker to monitor progress themselves.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

Target Customer Profiles

- Oracle CX / ERP implementation partners and system integrators.
- Independent consultants managing multi-module Oracle implementations.
- Internal IT / transformation teams managing ERP rollouts.
- PMOs seeking lightweight delivery governance tools.
- Customer success teams managing hypercare and post-go-live support.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

36. Suggested Demo Script

Use the following narrative for a 20–30 minute customer demonstration. Connect each feature to a pain point the customer currently experiences.

Stage	What to Say / Show	Presenter Notes
1. The Problem (2 min)	"You're managing 80 open points from last week's CRP across three Excel files and a chain of emails. Let me show you what that looks like properly managed."	Reference the customer's specific situation.
2. Open the Platform (1 min)	Open the HTML file. Show the customer logo loaded. "This is your project - your name, your logo, your phase."	Upload their logo before the demo for immediate personalisation.
3. Show the Tracker (5 min)	Walk through a pre-loaded tracker with 25–30 demo records. Show status badges, star a record, open the Filters drawer.	Use demo data from a realistic Oracle project context.
4. Add a Record Live (3 min)	Add a new record live: "Let's say the customer just raised this in today's session." Fill Requirement, Status, Priority, Due Date. Save.	Shows simplicity of data entry.
5. Dashboard (5 min)	Switch to Dashboard. Show Executive View first. Then Risk View: "These are the overdue items we need to discuss today."	Executive + Risk Views are the most impactful.
6. Delivered to Customer (2 min)	Find a Done record. Toggle Delivered to Customer to Yes. "This counter - Done Not Delivered - just went from 4 to 3."	This feature often generates the strongest customer reaction.
7. Export PDF (2 min)	"Before today's steering meeting, I exported this." Show the PDF - logo, project name, records, summary.	Export the demo PDF before the meeting for instant demonstration.
8. Full Backup (1 min)	"End of day - the consultant exports this backup. Monday morning, restore it, continue exactly where we left off."	Show the simplicity of the process.
9. Close (2 min)	"We can load your current open points, configure your team's statuses, and you're live within one hour."	Close with speed to value and ease of deployment.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

37. Best Practice Recommendations

Practice	Recommendation	Why It Matters
One file per project	Maintain one tracker per customer or project.	Keeps data clean and avoids cross-project reporting errors.
Daily backup	Export Full Backup JSON at end of every working day.	Protects against browser cache clearing, device loss, or accidental deletion.
Backup before changes	Export Full Backup before major bulk updates, imports, or admin changes.	Enables immediate recovery if results are unexpected.
Configure statuses first	Define and configure all Status values and Types before users add records.	Prevents incorrect dashboard counts from unmapped status types.
Assign owners to all records	Every open record should have an assigned owner.	Unassigned overdue records have no accountability and are hardest to close.
Review overdue weekly	Include Overdue Tasks as a standing agenda item in weekly meetings.	Ensures no overdue item is forgotten and maintains accountability.
Use Delivered to Customer	Do not close a project phase until all Done items are also Delivered to Customer.	Prevents completing work without formally informing the customer.
Role-based saved views	Set up saved views for each team role at project start.	Reduces daily setup time and ensures each user sees relevant records.
Dashboard in meetings	Display the Executive Dashboard at the start of every weekly meeting.	Creates a shared visual reference and avoids wasting time on status updates.
Milestone snapshots	Take a named snapshot before and after every major project milestone.	Provides forensic record of project state at governance moments.
Control dropdown values	Keep dropdown values clean and minimal. Remove unused values regularly.	Overcrowded dropdowns create confusion and reduce data consistency.
Train users first	Give all users a 30-minute walkthrough before they begin adding records.	Consistent usage ensures data quality and reporting accuracy.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

38. Limitations and Deployment Notes

Limitation	Detail	Recommended Workaround
Browser-based storage	All data stored in browser local storage - not cloud-hosted.	Export Full Backup JSON daily and store in shared project drive.
No real-time collaboration	Multiple users cannot edit simultaneously and see each other's changes live.	Establish one master user who exports the backup at session end. Others restore from the latest backup.
Same browser storage risk	Two project files opened in the same browser may share local storage keys.	Use separate browser profiles per project, or always restore from project-specific JSON backups.
No cloud synchronisation	No automatic sync to a server or cloud storage.	Share the JSON backup file via SharePoint or shared drive to collaborate.
Single-device persistence	Data on one computer is not accessible from another without backup restore.	Use Full Backup export/restore to move data between machines.
Dataset size	Optimised for project-scale datasets - very large datasets may slow rendering.	For projects exceeding 2,000 records, consider archiving completed records periodically.
No user authentication	No login system - anyone with the HTML file can access and modify data.	Treat the file as a sensitive project document. Control distribution through the PM.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

Appendix

A. Suggested Default Status Values

Status Value	Status Type	Due-Date Tracking
Not Started	Open	Enabled
In Progress	Work In Progress	Enabled
Waiting	Waiting / Pending	Enabled
Pending Customer	Waiting / Pending	Enabled
Pending Oracle	Waiting / Pending	Enabled
Done	Completed	Disabled
After UAT	Deferred	Disabled
Deferred	Deferred	Disabled
Cancelled	Cancelled / Not Applicable	Disabled
Out of Scope	Cancelled / Not Applicable	Disabled

B. Suggested Priority Values

Priority	When to Use	Example Situation
Critical	Showstopper - blocks UAT sign-off, go-live, or core operations.	CPQ cannot generate a quote. Go-live blocked.
High	Significant functional gap or customer-impacting issue.	Approval workflow not triggering correctly.
Medium	Standard open point with clear resolution path.	Field label needs renaming per customer terminology.
Low	Nice-to-have or cosmetic item.	Dashboard chart colour preference.

C. Suggested Project Phases

- CRP1 - Conference Room Pilot 1 (initial design validation)
- CRP2 - Conference Room Pilot 2 (revised design + configuration review)
- UAT - User Acceptance Testing
- UAT Closure - Final sign-off phase
- Go-Live Preparation
- Go-Live

© Comments Tracker Platform. For internal and customer use under controlled distribution.

- Hypercare - Post-go-live support period

D. Recommended Column Sequence

Seq	Column Name	Purpose
1	ID	Unique identifier - always first.
2	Requirement	Core content - always second.
3	Status	Lifecycle stage - immediately visible.
4	Priority	Urgency - near the front for triage.
5	Business Unit	Owner group - visible for team reviews.
6	Due Date	Target date - near front for planning.
7	Delivered to Customer	Governance flag - before the solution.
8	Solution	Resolution text - after governance flags.
9	Required Teams	Accountability - near the end.
10	Type	Classification - after core fields.
11	Scope	Module - useful for multi-module projects.
12	Effort	Capacity field.
13	Work Hours	Numeric effort - near effort classification.
14	Internal Comment	Private notes - near the end.
15	Last Updated	System metadata - last column.

E. Recommended Backup Process

Frequency	Action	Who Performs It
Daily (end of day)	Export Full Backup JSON. Name with date. Upload to project drive.	Designated master user / PM.
Before any bulk operation	Export Full Backup immediately before executing bulk updates or imports.	User performing the operation.
After each project milestone	Export with a milestone name (e.g. "Tracker_Pre-UAT_Baseline.json").	PM.
When moving machines	Export on old machine. Restore on new machine.	User changing devices.
Weekly archive	Keep one weekly backup per project week in a dedicated folder.	PM.

© Comments Tracker Platform. For internal and customer use under controlled distribution.

F. Glossary

Term	Definition
Open Point	A pending comment, requirement, issue, or action requiring resolution and follow-up.
UAT	User Acceptance Testing - phase where customer key users formally test the delivered solution.
CRP	Conference Room Pilot - a structured walkthrough session where the customer validates the configured solution.
Delivered to Customer	Formal flag confirming a resolved item has been communicated to and acknowledged by the customer.
Status Type	System category (Open, WIP, Waiting, Deferred, Completed, Cancelled) assigned to each status value to control platform behaviour.
Due-Date Tracking	Per-status setting controlling whether records in that status are eligible to appear as overdue.
Overdue	A record whose due date has passed while its status has due-date tracking enabled.
Done Not Delivered	A record in Completed status where Delivered to Customer = No. Represents a customer communication gap.
Snapshot	Point-in-time copy of tracker records for historical reference, comparison, or rollback.
Full Backup	Complete JSON export of all records, configuration, audit trail, snapshots, and project setup.
Audit Trail	Automatic system log of every change - who changed what, when, and from what value to what value.
Follow-up History	User-authored timestamped notes within a record capturing human decisions and communications over time.
LOV	List of Values - a configurable dropdown column type whose values are managed in the Dropdown Values Manager.
Boolean Switch	A Yes/No toggle field type for binary data capture.
Saved View	A named combination of filter settings applicable with one click from the filter drawer.
Bulk Update	An operation applying the same field change to multiple selected records simultaneously.
Net Open Change	Created This Week minus Completed This Week. Negative = backlog shrinking.
Hypercare	Post-go-live support period where the implementation team provides elevated issue resolution.

© Comments Tracker Platform. For internal and customer use under controlled distribution.
